## Data link provides wireless-over-water connectivity

May 3, 2007 5:17 PM

### BridgeWave's 80 GHz Extended Range

(GE80X) and AdaptRate

80 GHz Extended Range (AR80X) units are point-to-point outdoor wireless links that work in all weather conditions--and even over heavy-traffic waterways. These licensed outdoor wireless products deliver "four nines" or better link availability at distances over two miles. In one application, the AR80X system bridged the 2.25-mile distance between two hospitals, which included clear line-of-sight over a busy waterway that spans Upper New York Bay and Newark Bay. The GE80X and AR80X products are available now for \$36,900 and \$39,900, respectively.
